

MSME IDEA HACKATHON 6.0

Reference No. :- 26INC06AP044404	
1. Business Incubator Name	Dr Ameet Chavan
2. Business Incubator Email ID	director.iiec@vitap.ac.in
3. Business Incubator Mobile Number	9390638524
4. HI/BI State	ANDHRA PRADESH
5. HI/BI Name	VIT-AP University
6. Theme	Other Frontier Technologies
7. Idea Sector	Miscellaneous Sector (Environment, Forests, Water & Sanitation; Foods, Beverages, FMCG, Consumer Goods; Infrastructure, Construction, Housing; IT, ITES, Electronics, White Goods, Telecommunication; Metals, Engineering, Machinery, Automation and Transportation, Automotive, E Vehicles, Railways, Aviation, UAV and any other sub-sector)
8. Title of proposed idea/innovation	SafeHer AI - A Unified AI-Powered Womens Safety Platform for Smart and Secure Mobility
9. Briefly explain newness/uniqueness of the innovation	Womens safety in India is addressed through fragmented solutions such as navigation apps, ride-hailing platforms, wearable devices, and SOS applications that operate independently, leaving critical safety gaps throughout the mobility journey. SafeHer AI is a Unified AI-Powered Womens Safety Platform that delivers continuous, predictive, and context-aware protection before, during, and after every journey. It integrates AI Safety Mapping, Smart Ride Intelligence, Wearable Intelligence, Community Safety Intelligence, and an AI Safety Companion into a single intelligent ecosystem. Powered by a Unified AI Safety Brain, the platform combines environmental conditions, journey behaviour, physiological signals, and AI-assisted verified community intelligence to recommend safer routes, detect travel anomalies, identify contextual distress, provide live guardian support, verify safe arrival, and enable AI-assisted grievance redressal. Built for Indias diverse mobility ecosystem, SafeHer AI continuously strengthens its safety intelligence through community participation and contextual AI. By shifting womens safety from reactive emergency response to predictive risk assessment and preventive intervention, it offers a scalable, inclusive, and AI-driven solution for safer mobility across India.
10. Concept & Objective	India is home to over 690 million women, with increasing participation in education, employment, and daily mobility. However, the NARI 2025 report found that 4 in 10 women in urban India feel unsafe, highlighting the need for predictive, technology-driven safety solutions. SafeHer AI addresses this challenge by creating a unified safety ecosystem for ride-hailing services, public transport, corporate mobility, educational institutions, healthcare, tourism, and smart mobility platforms. The platform can also support Safe City Projects, Smart Cities Mission initiatives, State Police, Women Safety Cells, and emergency response systems through context-aware AI safety intelligence and AI-assisted community safety reporting. With widespread smartphone adoption, expanding digital infrastructure, and increasing use of wearable devices, India is well-positioned for AI-enabled safety platforms. SafeHer AIs interoperable architecture enables collaboration with government agencies, NGOs, CSR initiatives, mobility providers, and wearable manufacturers, creating a scalable and collaborative safety network. Aligned with Digital India, Smart Cities Mission, and womens empowerment initiatives, SafeHer AI has the potential to evolve into a scalable AI-enabled safety platform that strengthens mobility confidence and enables safer, smarter, and more inclusive travel for women across India.

11. Specify the potential areas of application in industry/market in brief	India is home to over 690 million women, with increasing participation in education, employment, and daily mobility. However, the NCRB reported over 4.45 lakh crimes against women in 2022, while the NARI 2025 report found that 4 in 10 women in urban India do not feel safe, highlighting the urgent need for predictive, AI-driven safety solutions. SafeHer AI addresses this challenge by creating a unified safety ecosystem for ride-hailing services, public transport, corporate employee transportation, educational institutions, healthcare, tourism, and smart mobility platforms. The platform can also strengthen Safe City Projects, Smart Cities Mission initiatives, State Police, Women Safety Cells, and emergency response systems through AI-powered safety intelligence and community-driven reporting. With 100 Smart Cities under development and the Government of Indias continued investment in Safe City Projects, SafeHer AI offers a scalable solution that integrates with existing digital infrastructure. Its interoperable architecture enables collaboration with government agencies, NGOs, CSR initiatives, mobility providers, and wearable manufacturers, creating a nationwide collaborative safety network. Aligned with Digital India, Smart Cities Mission, and women-led development initiatives, SafeHer AI has the potential to become Indias AI-powered mobility safety platform, enabling safer, smarter, and more inclusive travel for millions of women.
12. Briefly provide the market potential of idea/innovation	Indias growing digital mobility ecosystem presents a strong market opportunity for SafeHer AI. With over 690 million women, increasing workforce participation, rising adoption of ride-hailing services, and expanding smart city infrastructure, there is a growing demand for AI-driven, preventive safety solutions that extend beyond traditional SOS applications. SafeHer AI is designed as a scalable Safety-as-a-Service (SaaS) platform with applications across ride-hailing providers, corporate employee transportation, educational institutions, hospitals, public transport systems, tourism, and smart city ecosystems. The platform can also support State Police, Women Safety Cells, Safe City Projects, and municipal authorities by providing contextual safety intelligence and community-driven safety reporting. The commercialization strategy focuses on a phased approach: B2C through premium safety services and wearable integration, B2B through enterprise mobility and institutional safety solutions, and B2G through partnerships with government-led safety initiatives. This diversified model creates sustainable revenue while maximizing public impact. With its interoperable architecture and modular design, SafeHer AI has the potential to become a trusted digital safety layer for Indias mobility ecosystem, improving womens confidence in independent travel while supporting the nations vision for safer, smarter, and more inclusive mobility.
